Flooder: make the service pay for messages nobody asked for
Pumper: be paid a share of the fee on its partner's ranges
share of the termination fee
Client
scripts behind proxies

beyond the attacker's reach
deliver
Terminating Operator
the pumper's partner
controls here
proxies, bought CAPTCHA tokens, fresh fingerprints, the numbers it asks for
knows
every threshold and timing; sees one uniform response
cannot touch
the route, the receipts or the service's state
controls on its own ranges
enters codes, fakes receipts, builds trust before flooding
cannot forge an attestation, earn on ranges its partner does not terminate, or make a stranger enter a code
outside the model: attacks on a delivered code; compromise of the service, its vendors or the attestation providers
